

Complete Cloud Security with Centrify + Elastica

CENTRIFY ALLIANCE

Today's typical business uses hundreds of cloud applications like Salesforce.com, Office 365, ServiceNow and Google Apps. Employees are accessing these apps with their own devices from outside the corporate network. While this accelerates business agility, it can also increase risk when not managed properly.

The Cloud Access Security Broker (CASB) model is quickly becoming the de facto standard for securing cloud apps across the enterprise. Elastica's CloudSOC allows organizations to audit and protect their cloud apps. Elastica can create and enforce policies for your cloud services that prevent attacks and ensure corporate governance. Centrify improves end-user and IT productivity, while securing access to cloud, mobile, and on-premises apps via single sign-on, multi-factor authentication and provisioning of users and mobile apps.

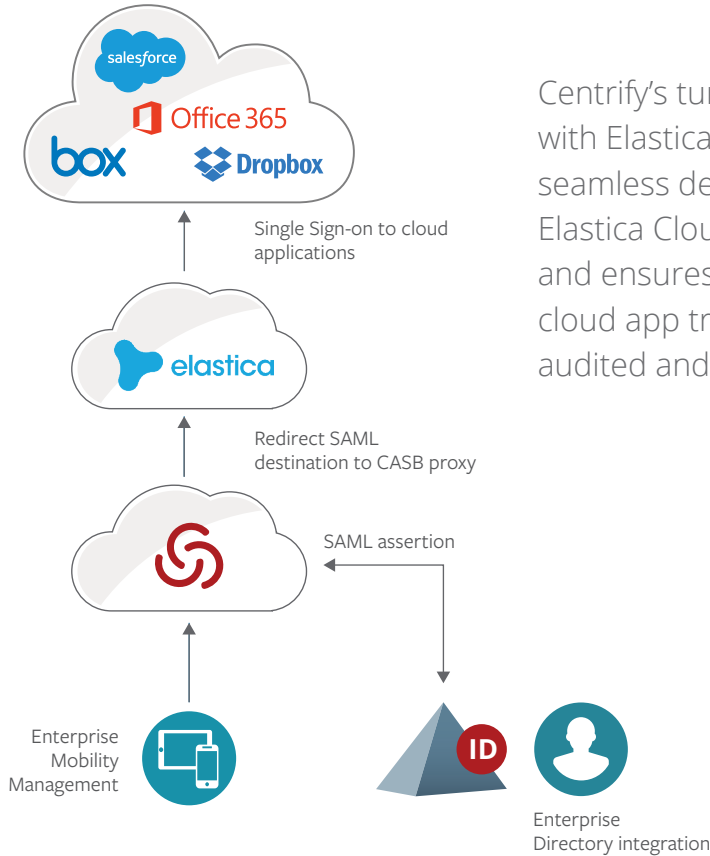

Centrify Identity Service™ integrates with Elastica Apps to provide a comprehensive solution for provisioning, governing, and securing enterprise cloud apps

- Secure access to business-critical applications via directory integration
- Automatic provisioning and de-provisioning of users
- Application and mobile device provisioning & management
- Governance policies based on user identity, devices and locations
- Visibility into both sanctioned and unsanctioned cloud app use
- Detection of threats in cloud services
- Protection of cloud services by using intuitive global policies

5000+ Customers, including 24 of the Fortune 50, rely on Centrify

Cloud Security Made Easy

Centrify's turnkey integration with Elastica provides seamless deployment of the Elastica CloudSOC solution and ensures the appropriate cloud app traffic can be audited and protected.

Try Centrify for Elastica — **Free!**

Free Edition for Elastica	
Single sign-on for cloud and mobile	Your single app
Active Directory, LDAP and/or cloud-based authentication and administration	✓
Integrated mobile device management	✓
