

# Enterprise Identity Access and Governance with Centrify & Clear Sky ILM

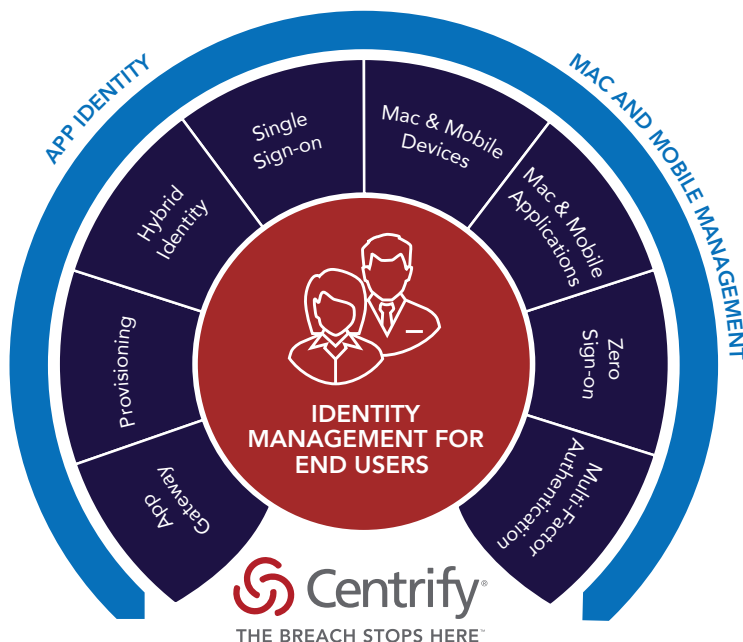

## CENTRIFY ALLIANCE

Centrify and Clear Sky provide enterprise identity access, governance and identity lifecycle management for ServiceNow.

Stop breaches before they start, gain instant visibility to risk and accelerate identity operations with Centrify & Clear Sky ILM. The joint solution combines Centrify's proven IAM capabilities with Clear Sky ILM's intuitive workflows and automation powered by the ServiceNow Platform.

With Centrify, IT can centrally provision new users into ServiceNow and other SaaS applications, create custom access policies, and automatically revoke access when needed. Centrify's enterprise-grade identity access management makes it easy for IT to deploy and manage how employees access ServiceNow accounts. IT can give users the ability to request access to new applications or give privileged users the ability to request access to resources from within ServiceNow and approvers can grant access to requested applications or resources without leaving the ServiceNow interface.

The result: lower cost to roll out and manage ServiceNow and other cloud services, and improved user adoption, satisfaction and productivity all while maintaining control and visibility into all aspects of application and resource access

### Directory Integration and Single Sign-on

Improves user experience and productivity while eliminating password reset calls — a top support cost. Leverage your existing Active Directory or LDAP infrastructure to provide access to cloud and on-premises apps and resources.

### Mobile Device Management & Security

Mobile Device Management with integrated multi-factor authentication including wearable device notifications, for all applications that require additional scrutiny.

### Centrify Mac Management

Join Macs to Active Directory and manage them with Group Policy. Make Mac mainstream with full IT control. Easily deploy and manage Dropbox with Centrify for Mac.

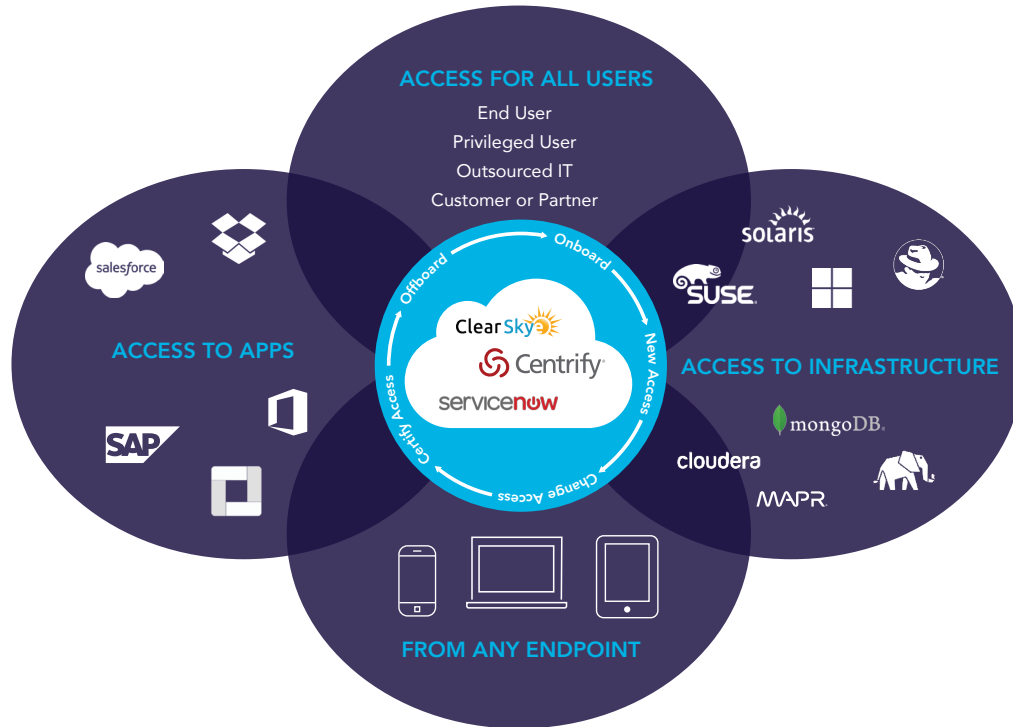

### On-Premises App Gateway

Secure, one-click, remote access to internal web apps like SharePoint, and SAP, without the hassles and risk of VPN. Productivity for employees, partners and suppliers. Visibility and policy-based control for IT.

5000+ Customers, including more than half of the Fortune 100, rely on Centrify

# Unified Identity & Lifecycle Management

Clear Sky Identity Lifecycle Management and Centrify Application Access, Privilege Access and Password Reset for ServiceNow is now available to ServiceNow customers via the ServiceNow Store, the marketplace for ServiceNow apps.

## Benefits

- **On Boarding:** leverage pre-built workflows and automation to seamlessly provision system access for new hires
- **Access Requests:** provide documented access to secondary systems or environments from intuitive portals
- **Off Boarding/Rogue Accounts:** immediately disable access for terminated employees or other system accounts they may be rouge or malicious
- **Role Changes:** ensure access rights are in alignment with employee roles during role transfers
- **Access Certifications:** on a scheduled basis verify employees have only the access they need — instantly remove access they don't need
- One-click access to 3,000+ SaaS and on-premises apps and resources with no integration hassles
- Reduced helpdesk volume for forgotten passwords and device enrollment via user self-service
- Time savings via automatically creating, updating or de-activating user accounts across applications and resources with workflows for managers and LOB approvals
- Visibility into who has access to which applications and resources, how they received access, and when changes occurred
