

Centrify for Google Cloud

Enhance security and simplify management across a broad range of Google Cloud products

Cloud and mobile have changed the way work gets done. More people are working together from any device or location, with cloud-based tools to help them connect and collaborate. Google Cloud is at the forefront of this transformation by delivering tools businesses rely on — G Suite, Android, Chromebooks and Google Compute Engine. Centrify for Google Cloud secures and simplifies multiple Google Cloud products, allowing companies to confidently go Google at work.

G Suite

G Suite is a suite of cloud-based productivity and collaboration tools, including Gmail, Google Drive, Google Hangouts, Google Calendar and Google Docs.

Active Directory (AD) Integration

Leverage your existing AD or LDAP infrastructure. Centrify works without replicating sensitive user credential data to the cloud or a third-party, and requires no changes to firewall policies. If your business prefers a 100% cloud-based or hybrid directory, Centrify supports that too.

Automated Account Provisioning

When IT creates a new user in AD, Centrify can automatically create a G Suite account for him, with the correct authorization, and single sign-on access. When an employee leaves, remove him from AD and his Google Apps access is automatically revoked, ensuring only the right users have access at all times.

Secure Single Sign-on (SSO)

Reduce end user frustration with one-click or tap access to G Suite and other cloud apps from any device, using a single user name and password. Centrify leverages industry standard SAML to enable secure SSO.

Multi-factor Authentication (MFA) and Policy

Implement strong authentication to G Suite. Centrify lets you define context-aware authentication policy that can progressively challenge for MFA. Users get simple MFA via automated push notification, fingerprint, one-time passcode, SMS and more.

Android for Work

Millions of users love Android. Now enterprises can too. Android for Work lets businesses confidently deploy Android devices in the workplace.

Separate Personal and Work Data

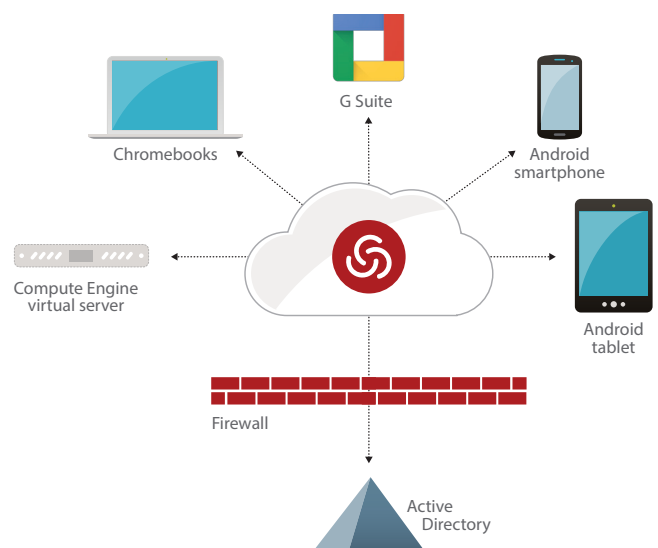

Centrify can provision an encrypted, dedicated Work Profile to managed Android devices. This Work Profile keeps business apps and data separate and secure while keeping personal information private.

Secure App Distribution

Centrify lets you centrally distribute and manage mobile apps. Push corporate email profiles to managed Android devices. Add internally built or third-party apps to the Google Play for Work app store. Prevent installation of apps from unknown sources or sideloading of apps.

Device-aware Authentication

With Centrify, you can unify device context, user identity and IT policy to grant app access only to authorized devices. Control access to apps and other corporate resources with policy-based conditions that evaluate criteria such as device posture, user location, network, etc.

True Single Sign-On (SSO)

Provide a secure hassle-free user experience with TrueSSO. Only Centrify extends SSO to managed apps, including email links. When a user clicks on a link, he does not need to re-authenticate. Centrify leverages certificates on the enrolled device to securely authenticate the user.

Chromebooks

Chromebook is a different breed of computer that runs on an operating system built by Google, Chrome OS, and gives users access to applications in the cloud.

Secure Single Sign-on (SSO)

Deploy Chromebooks with secure SSO. Using industry standard SAML, Centrify lets you use your existing AD or LDAP infrastructure without syncing passwords to the cloud. End users can use their existing corporate identity to login to Chromebooks and get seamless access to all the corporate apps they need to get their job done.

Multi-factor Authentication (MFA) and Policy

Boost security by implementing MFA for Chromebooks and apps accessed via Chromebooks. Centrify provides context-aware, step-up authentication based on policy. Users get hassle free MFA with automated push notification, fingerprint, single-tap one-time passcode, SMS and more.

Google Compute Engine

Google Compute Engine is the Infrastructure-as-a-Service (IaaS) component of Google Cloud Platform. Google Compute Engine lets IT and developers create and run virtual machines on the same Google infrastructure that runs Google's search engine, Gmail and other services.

Shared Account Password Management

Control shared access to privileged accounts used to administer and manage Compute Engine. With Centrify, authorized IT users can checkout one-time passwords for a limited duration to access administrative accounts. This ensures user activity is tracked to a specific session and reduces the risk of potential data breach through compromised credentials.

Granular Control without a VPN

Control who can access specific Compute Engine resources, with policy that limits access to specific virtual servers or applications. Centrify provides IT administration teams with secure, granular access to infrastructure regardless of location, and without the hassles of a VPN.

Privileged Session Monitoring

Identify suspicious user activity, conduct forensic investigations and prove compliance with privileged session monitoring and auditing of shared administrative accounts. Centrify captures and collects data about privileged sessions on Compute Engine's virtual servers, and stores it in an easily searchable SQL Server database.

Benefits

- Go Google Cloud with confidence
- Protect end user and privileged user identities with a single platform
- Simplify management of mobile, cloud apps and cloud infrastructure
- Provide a better user experience with streamlined authentication and access on any device
- Confidently expand device choice and BYOD to include any Android device

Centrify strengthens enterprise security by securing identities from cyberthreats. Centrify uniquely unifies identity for privileged and end users across cloud, mobile and data center. Centrify improves security, compliance, agility and productivity for over 5000 customers, including over half of the Fortune 50 and over 80 federal agencies. www.centriify.com.
