

Managed Service Provider (MSP)

Program Overview

Cloud and mobile apps are quickly forcing their way into the enterprise, facilitating employee productivity, but exposing business-critical data. Cloud apps, and the mobile devices that can access app data, are often outside of IT control. Centrify Managed Service Providers (MSP) are skilled at cloud infrastructure and managing mobile apps that deliver security, simplicity and control to customers — with fast deployment, facilitating employee productivity.

In order to obtain the Centrify MSP designation, MSPs must meet the Centrify MSP Program requirements, including a third party audit of their Managed Service capabilities.

Managing Access is the Problem

Security — too many locks, too many keys

Managing and securing access to each individual cloud app and mobile device means managing unique accounts, passwords, and policies across hundreds — often thousands — of endpoints and apps. With so many disparate systems and devices, IT needs a single solution from which to provision users and manage access policy across all apps, from any device, regardless of location.

Password sprawl wastes time for IT and users

With growing application access, users are resorting to password sharing and reuse, exposing corporate data to attacks based on compromised credentials. Compounding this issue is an exponential increase in helpdesk calls and tickets for password resets — reducing IT productivity and user satisfaction.

User productivity leads to IT inefficiency

With dozens — or hundreds — of apps in use, controlling which users have access to specific apps becomes unmanageable. Staying on top of account provisioning is not only cumbersome, but leads to security holes and failed compliance audits if terminated employees have access to corporate apps and data after they leave.

Identity is the Solution

Integrated cloud app and mobile management Centrify Identity Service™ uniquely unifies cloud app and mobile management into an enterprise cloud service. Centrify leverages identity to secure and manage user access to applications from any device, regardless of location. By leveraging a single identity across cloud, mobile and onsite apps, users get a single username and password across all the apps they use for work, and IT can enforce consistent access policies based on user identity. Identity Service provides a single, simple cloud portal for app management. Users get one-click access all their apps from any device, and IT gets policy-based control, and automated provisioning and account management.

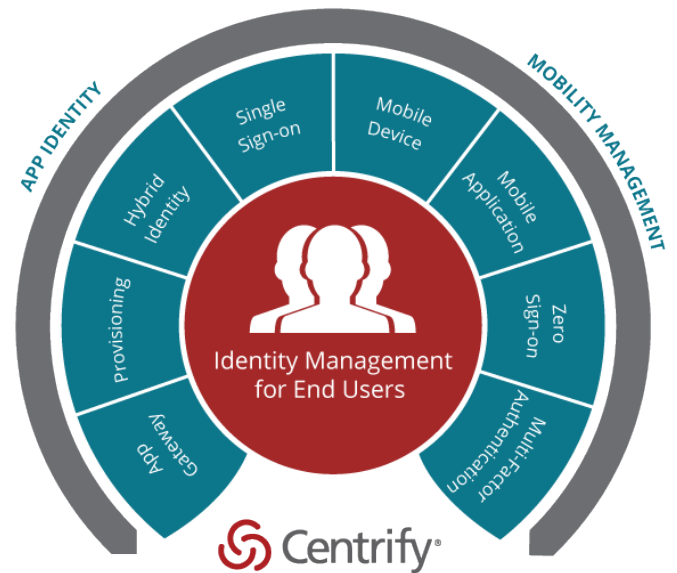

Centrify Identity Service

The benefits of integrated identity management

Identity Service provides security, simplicity and control. IT gets one place to manage all accounts and devices. Users get single sign-on across cloud and mobile apps from any of their devices.

- Control cloud and mobile applications with identity-based policy across apps and devices
- Eliminate the security risk of simple, reused and/or improperly managed passwords
- Enable secure, remote access to on-premises — apps without the risks and hassles of VPNs
- Implement a secure BYOD policy with Centrify's integrated Mac and mobile device management

Offer MSP IDaaS for your Customers!

Centrify is the leader in securing enterprise identities against cyberthreats that target today's hybrid IT environment of cloud, mobile and on-premises. The Centrify Identity Platform protects against the leading point of attack used in data breaches — compromised credentials — by securing an enterprise's internal and external users as well as its privileged accounts. www.centriify.com.
