

# Okta Integration with the Centrify Privileged Access Service

## Strengthen Privileged Access Controls

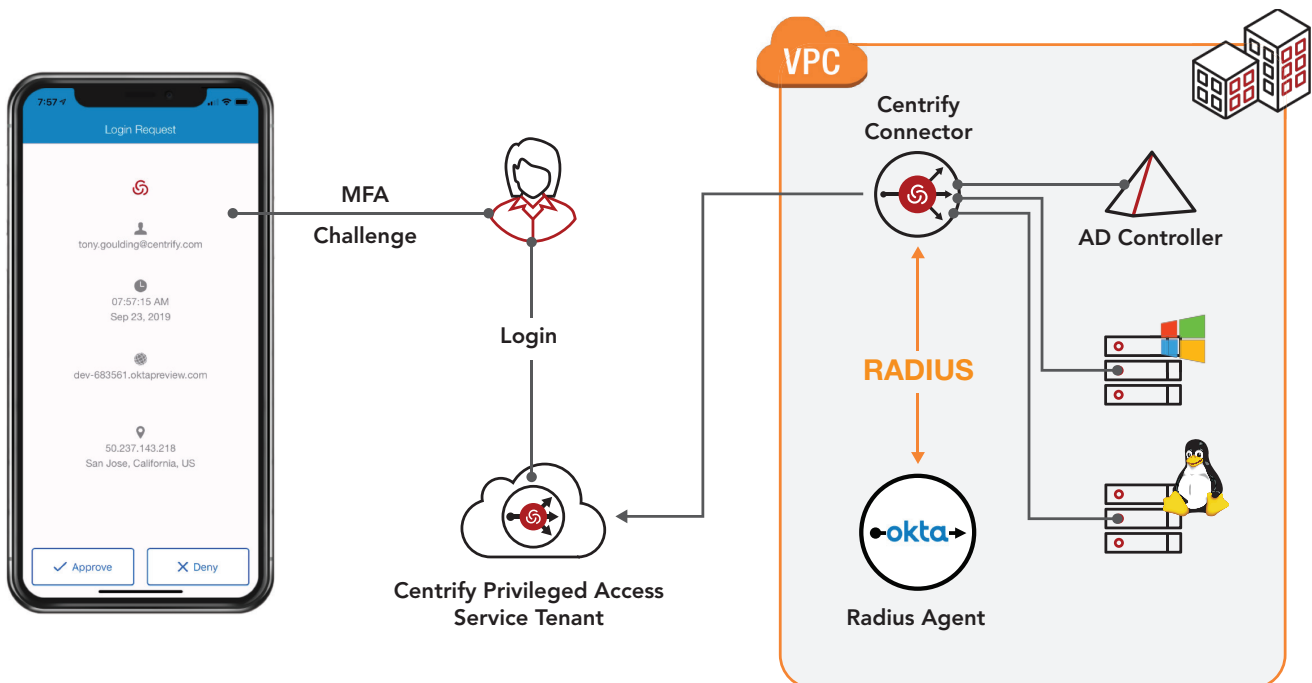

With privileged access abuse being the leading cause of today's breaches, it is crucial to secure access to these superuser accounts that represent the "keys to the kingdom". The Centrify Privileged Access Service achieves this by securely vaulting these shared privileged account passwords and governing their legitimate use via roles and workflow-based approvals. The integration with Okta ensures users accessing the Centrify Privileged Access Service portal are who they say they are by adding an additional layer of security via single sign-on (SSO) and adaptive multi-factor authentication (MFA).

At a basic level, the Centrify Privileged Access Service enables password checkout and remote login to infrastructure (e.g., servers, network devices, containers). By vaulting away shared account passwords, application passwords, and secrets, the Centrify Privileged Access Service helps customers reduce their attack surface, improves audit and compliance visibility, and reduces risk, complexity, and costs for the modern, hybrid enterprise. To further mitigate the risk of unauthorized and nefarious access, Centrify has partnered with Okta to allow joint customers to leverage Okta Single Sign-On (SSO) and Okta Adaptive MFA when accessing their password vault.

The integration of Okta with Centrify allows for secure and centralized authentication to the Centrify Privileged Access Service. The integration leverages the following Okta features:

### Okta Single Sign-On

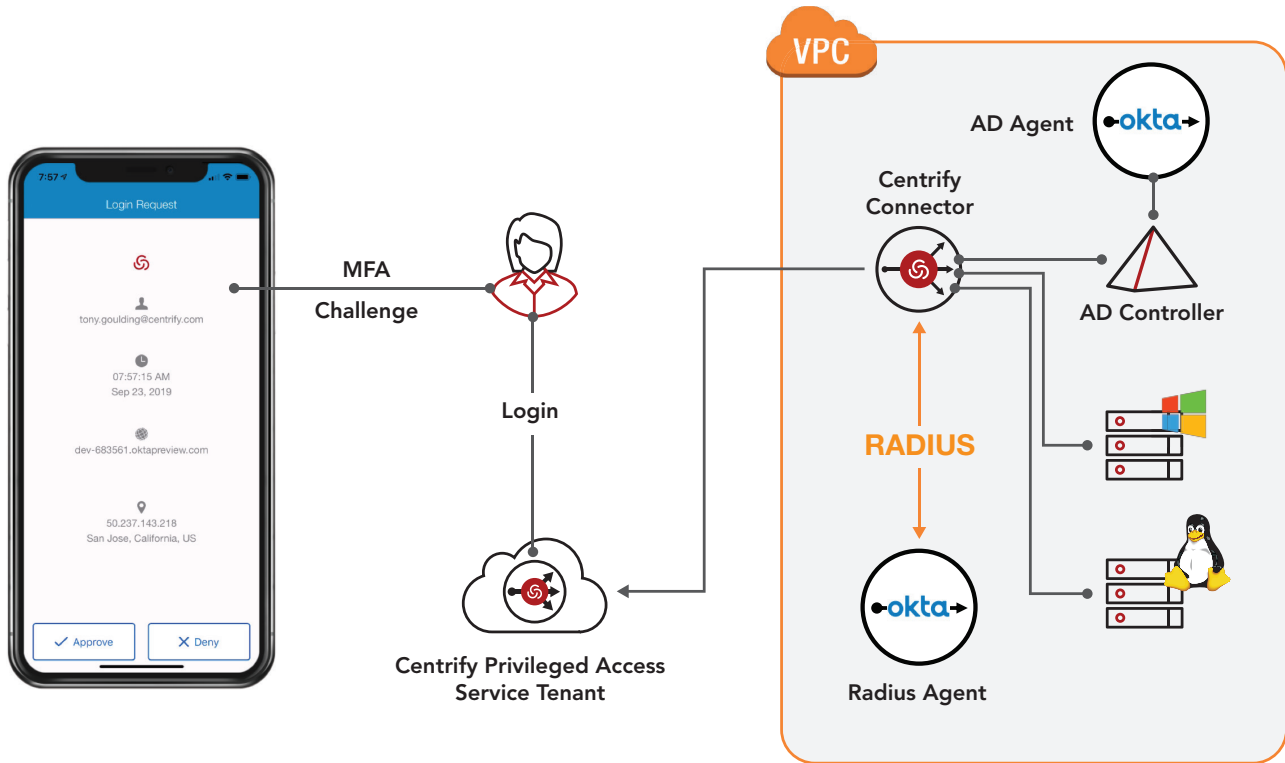

Okta integrates with Centrify Privileged Access Service, providing privileged users a simple, secure, and familiar experience when accessing the Centrify Privileged Access Service portal. By leveraging Okta Single Sign-On, joint customers can maintain a high level of user productivity, without compromising security.

### Okta Adaptive Multi-factor Authentication via RADIUS

Centrify Privileged Access Service integrates with Okta Adaptive Multi-factor Authentication, allowing for easy verification of privileged user identities during login to the Centrify Privileged

Access Service portal. Okta Adaptive MFA via RADIUS protocol provides flexible security, leveraging one of a broad range of supported step-up authentication factors.

### Centrify and Okta — Better Together

- Enable seamless single sign-on to the Centrify Privileged Access Service, reducing administrative burden.
- Manage authentication via privileged credentials for administrators, developers, and operations teams who require access to sensitive data.
- Gain an additional layer of step-up security for access to the Centrify password/secrets vault via Okta Adaptive MFA.
- Continuous monitoring and secure access control.

### About Okta

With more than 6,000 out-of-the-box integrations, Okta makes it easy to bring identity to various elements of your agency infrastructure. Born in the cloud and supporting best-of-breed technology, Okta Identity Cloud helps ensure success in digitally engaging users of all types — be they citizens, employees, contractors, or other agency stakeholders — while increasing security, increasing efficiency, and reducing costs. To discover more ways in which Okta can help modernize and secure your organization, visit [www.okta.com/solutions/government-agencies/](http://www.okta.com/solutions/government-agencies/)

Centrify enables digital transformation at scale, modernizing how organizations secure privileged access across hybrid- and multi-cloud environments with Identity-Centric PAM based on Zero Trust principles. To learn more, visit [www.centrify.com](http://www.centrify.com).
